Pest Removal Tool

## + Development Background

**Due to climate change**, many unfamiliar pests are starting to move and encroach upon our daily lives. This is the new reality of discomfort that can lead to emergencies related to health and hygiene management.

**The damage from all types of insects is particularly serious in restaurants, home kitchens, and bathrooms.**

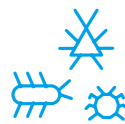

## + Research, Development Goals, and Solutions

**We have developed products that are eco-friendly and human-friendly**

We solved the issue of dangerous products by using **100% natural herbal oils** and researching natural fragrances

**We have developed products that are effective against a variety of bugs**

Various natural oils, which have been proven effective against numerous types of insects, are mixed into the product to help get rid of a variety of pests.

**We have developed products that maintain long-term effects**

We searched for various types of natural binders that could reduce the size of solid binders and provide continuous fragrance.

## + Main Installation Area

The product can be installed in daily living spaces such as restaurants, home kitchens and verandas, living rooms, toilets, military quarters, guard houses, and outdoor tents.

## + How to Install

01

Check the installation area, cleaning it thoroughly.

02

Select the best place to install the pest Removal Tool.

03

After selecting the installation site, determine the appropriate number of products that need to be installed. [Install two products per 5 pyeong (m<sup>2</sup>)]

04

Install the Removal Tool.

05

You should notice an obvious repelling effect one to two days after installing the Removal Tool due to the natural fragrances.

06

If two days pass without seeing any results, increase the number of products installed and adjust the location of the installation site as necessary.
