- ✓ Human-friendly and eco-friendly Removal Tool
- ♥ Customized construction is possible regardless of location
- Anyone can install the product simply and easily
- Patented product that has passed testing
- through many practical construction cases

Harmful Birds

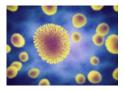

Damage to Buildings

When pigeon droppings containing ammonia and acid solidify and combine with rainwater, they cause a chemical reaction that corrodes iron. As this has been occurring for a long time without proper treatment, it may have affected the structural stability of bridges.

Power Outages

Local residents are worried about the occurrence of power outages due to the fact that birds have been building their nests along the wires of telegraph poles and electrical power substations.

Cause Serious Illness

Bird droppings can cause serious illness in humans, such as meningitis and avian influenza. In extreme cases, these droppings can lead to severe sequelae and death.

Damage to Fruit Farms

Birds cause direct damage to fruit farms such as pear farms and apple orchards.

Bird Removal Tool for Structures

Quality and Functionality

General Bird Removal Tool for Structures

- ▶ It is strong against external environmental factors, maintains a stable form and has a continuous function for more than two years.
- ▶ It maintain its functional stability even against high temperatures(70°C) and low temperatures(-20°C)
- Even during rain (heavy rain), thanks to its strong viscosity it won't get washed out

How to Install

Sairen can be installed in a way that allows the user to maintain the external aesthetics of the area. By preventing the corrosion of facilities, the service life of facilities can be extended, reducing management costs.

01 Field Survey

Wear basic equipment (masks.
